Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (original) A high temperature resistive coating composition comprising:
 - a pigmenting component including a spinel;
 - a binder component including a silicone resin; and
 - a hardening agent.
- 2. (original) The high temperature resistive coating composition of claim 1, wherein said spinel of said pigmenting component is of the formula AB₂O₄, in which

A is selected from the group consisting of Mg, Fe, Zn, (Mn), Cu, Ni and combinations thereof, and

B is selected from the group consisting of Al, Fe, Cr and combinations thereof.

- 3. (original) The high temperature resistive coating composition of claim 2, wherein said spinel has a formula of CuCr₂O₄.
- 4. (original) The high temperature resistive coating composition of claim 1, wherein said pigmenting component is a solution of said spinel in an aqueous acid.
- 5. (original) The high temperature resistive coating composition of claim 4, wherein said pigmenting component has a pH less than 1.0.
- 6. (original) The high temperature resistive coating composition of claim 4, wherein said acid is selected from the group consisting of chromic acid, phosphoric acid, and a combination thereof.

- 7. (original) The high temperature resistive coating composition of claim 6, wherein said pigmenting component has a pH less than 1.0.
- 8. (original) The high temperature resistive coating composition of claim 4, wherein said pigmenting component contains 25-75% spinel and 25-75% acid.
- 9. (original) The high temperature resistive coating composition of claim 4, wherein said pigmenting component further includes a water-soluble crosslinking agent for crosslinking the silicone resin.
- 10. (original) The high temperature resistive coating composition of claim 9, wherein said crosslinking agent forms 2-10% of said pigmenting component.
- 11. (original) The high temperature resistive coating composition of claim 1, further comprising a metal oxide.
- 12. (original) The high temperature resistive coating composition of claim 1, further comprising at least one modifying agent selected from the group consisting of surfactants, dispersants and emulsifiers.
- 13. (original) The high temperature resistive coating composition of claim 1, wherein the silicone resin of said binder component is a polysiloxane.
- 14. (original) The high temperature resistive coating composition of claim 1, wherein the silicone resin has a methyl to phenyl ratio of between 30:70 and 70:30.
- 15. (original) The high temperature resistive coating composition of claim 1, wherein said binder component further includes an organic solvent.
- 16. (original) The high temperature resistive coating composition of claim 15, wherein said organic solvent and said silicone resin are present in a substantially 1:1 ratio.

- 17. (original) The high temperature resistive coating composition of claim 1, wherein said hardening agent is constituted by a finely powdered material selected from the group consisting of diamond powder, BN, WC, SiC, Al₂O₃, AlN and SiO₂.
- 18. (original) The high temperature resistive coating composition of claim 17, wherein said hardening agent is a finely powdered material having a formula of SiC.
- 19. (original) The high temperature resistive coating composition of claim 1, wherein said composition is a liquid at room temperature.
- 20. (original) The high temperature resistive coating composition of claim 19, wherein said pigmenting component, said binder component and said hardening agent are provided in a ratio of one liter to one liter to 100-200 grams, respectively.
- 21. (original) A cooking appliance:
 - an oven cavity having an interior surface;
 - a heating element for heating said oven cavity;
 - a rack arranged in the oven cavity; and
- a high temperature resistive coating composition arranged on at least one of the interior surface of said oven cavity and said rack, said high temperature resistive coating composition being formed from:
 - a pigmenting component including a spinel;
 - a binder component including a silicone resin; and
 - a hardening agent.
- 22. (original) The cooking appliance of claim 21, wherein said spinel of said pigmenting component is of the formula AB₂O₄, in which

A is selected from the group consisting of Mg, Fe, Zn, Mn, Cu, Ni, and combinations thereof, and;

B is selected from the group consisting of Al, Fe, Cr and combinations thereof.

- 23. (original) The cooking appliance of claim 22, wherein said spinel has a formula of CuCr₂O₄.
- 24. (original) The cooking appliance of claim 21, wherein the coating composition includes a metal oxide.
- 25. (original) The cooking appliance of claim 21, wherein the coating composition further comprises at least one modifying agent selected from the group consisting of surfactants, dispersants and emulsifiers.
- 26. (original) The cooking appliance of claim 21, wherein the silicone resin of said binder component is a polysiloxane.
- 27. (original) The cooking appliance of claim 21, wherein the silicone resin has a methyl to phenyl ratio of between 30:70 and 70:30.
- 28. (original) The cooking appliance of claim 21, wherein said hardening agent is constituted by a finely powdered material selected from the group consisting of diamond powder, BN, WC, SiC, Al₂O₃, AlN and SiO₂.
- 29. (original) The cooking appliance of claim 28, wherein said hardening agent is a finely powdered material having a formula of SiC.
- 30. (canceled)
- 31. (canceled)
- 32. (canceled)
- 33. (canceled)

34. (canceled) 35. (canceled) 36. (canceled) 37. (canceled) 38. (canceled) 39. (canceled) 40. (canceled) 41. (canceled) 42. (canceled) 43. (new) The cooking appliance of claim 21, wherein said pigmenting component is a solution of said spinel in an aqueous acid. 44. (new) The cooking appliance of claim 43, wherein said pigmenting component has a pH less than 1.0. 45. (new) The cooking appliance of claim 43, wherein said acid is selected from the group consisting of chromic acid, phosphoric acid, and a combination thereof. 46. (new) The cooking appliance of claim 45, wherein said pigmenting component has a pH less than 1.0.

Application No. 09/995,754

Reply to Office Action dated November 17, 2003

- 47. (new) The cooking appliance of claim 43, wherein said pigmenting component contains 25-75% spinel and 25-75% acid.
- 48. (new) The cooking appliance of claim 43, wherein said pigmenting component further includes a water-soluble crosslinking agent for crosslinking the silicone resin.
- 49. (new) The cooking appliance of claim 48, wherein said crosslinking agent forms 2-10% of said pigmenting component.
- 50. (new) The cooking appliance of claim 21, wherein said binder component further includes an organic solvent.
- 51. (new) The cooking appliance of claim 50, wherein said organic solvent and said silicone resin are present in a substantially 1:1 ratio.
- 52. (new) The cooking appliance of claim 21, wherein said composition is a liquid at room temperature.
- 53. (new) The cooking appliance of claim 52, wherein said pigmenting component, said binder component and said hardening agent are provided in a ratio of one liter to 100-200 grams, respectively.
